

## JFK MEMORIAL HOSPITAL

### Project summary

As part of the modernization of Liberia's health infrastructure, including the implementation of clinical research programs for the control and prevention of infectious diseases, the JFK Hospital in Monrovia has decided to completely rehabilitate its entire medical imaging suite. The realization of this work, all trades, has been entrusted to SFEH and its African platform for execution and maintenance, the company I2E. The project involved the demolition of existing premises, their refurbishment, the preparation of all rooms to receive the various imaging modalities, including the CT Scan and MRI. The removal of the existing structure and roof and its replacement by a steel structure, insulation and waterproofing roof; the construction of a remote technical platform housing energy production, emergency and protection equipment and water treatment.

**Customer** : JFK Memorial Hospital
